## Password Protecting Files

In this assignment you will be password protecting files for your fellow students to crack. You are free to use any program that is on the PRTK Module list found in the [PRTK DNA User Guide.pdf](#) file as long as you use a supported version. Note that many of the programs have a newer unsupported version, so use the older supported version for this assignment. Be sure to use 5 different programs for this assignment.

Note that fellow students will be cracking your files, so please do not password protect any sensitive file or password protect anything that might be offensive to another student.

Use the following table when creating your files

Guidelines to use when creating a password	Filename Replace the first ? with a code word and the second ? with your file extension	Program Used Use a different program for each case	Password Used
Any English word in lowercase	reyhstag_1.pdf	Adobe Acrobat Pro	union
Any English word in mIXed cASe	pump_2.jpg	winrar	BlAdE
Any number less than 1,000,000	Flag_of_the_Soviet_Union_3.png	OpenOffice	321987
Random anything up to a length of 6	russia-mineral-map_4.7z	7Zip	STaN12
Any word from any Harry Potter book	Locker_5.bat	Batch	Voldemort
